

Database : parul

Table :

```
CREATE TABLE `user` (  
  `firstname` varchar(20) NOT NULL,  
  `username` varchar(20) NOT NULL,  
  `password` varchar(20) NOT NULL,  
  `city` varchar(20) NOT NULL  
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8mb4_general_ci;
```

For installing/ importing SQL Connector Library :

Project Files -> pom.xml

```
<?xml version="1.0" encoding="UTF-8"?>  
<project xmlns="http://maven.apache.org/POM/4.0.0"  
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
  xsi:schemaLocation="http://maven.apache.org/POM/4.0.0  
    http://maven.apache.org/xsd/maven-4.0.0.xsd">  
  <modelVersion>4.0.0</modelVersion>  
  <groupId>com.mycompany</groupId>  
  <artifactId>DivE</artifactId>  
  <version>1.0-SNAPSHOT</version>  
  <packaging>jar</packaging>  
  <properties>  
    <project.build.sourceEncoding>UTF-8</project.build.sourceEncoding>  
    <maven.compiler.source>17</maven.compiler.source>  
    <maven.compiler.target>17</maven.compiler.target>  
    <exec.mainClass>com.mycompany.dive.DivE</exec.mainClass>  
  </properties>  
  <dependencies>  
    <!-- https://mvnrepository.com/artifact/mysql/mysql-connector-java -->  
    <dependency>  
      <groupId>mysql</groupId>  
      <artifactId>mysql-connector-java</artifactId>  
      <version>8.0.33</version>  
    </dependency>  
  </dependencies>  
</project>
```

For Inserting DATA using Statement :

```
import java.sql.*;

/**
 *
 * @author hardikparmar
 */

public class DIVE {

    public static void main(String[] args) {
        Try{

            Class.forName("com.mysql.cj.jdbc.Driver");
            Connection con =
            DriverManager.getConnection("jdbc:mysql://localhost:3306/parul","root","");
            Statement st = con.createStatement();

            int count= st.executeUpdate("INSERT INTO `user`(`firstname`,`username`,`password`,`city`) VALUES ('ABC','ABC','1234','Vadodara')");

            if(count>0){
                System.out.println("Data Inserted ");
            }
            else{
                System.out.println("Data NOT Inserted ");
            }

            con.close();
        }
        catch (Exception e){
            e.printStackTrace();
        }

    }
}
```

For Inserting DATA using PreparedStatement :

```
import java.sql.*;

/**
 *
 * @author hardikparmar
 */
public class PSSStatement {
    public static void main(String[] args) {
        try{
            Class.forName("com.mysql.cj.jdbc.Driver");
            Connection con =
DriverManager.getConnection("jdbc:mysql://localhost:3306/parul","root","");
            PreparedStatement ps = con.prepareStatement("INSERT INTO `user`(`firstname`,
`username`, `password`, `city`) VALUES (?, ?, ?, ?)");
            ps.setString(1, "XYZ");
            ps.setString(2, "XYZ");
            ps.setString(3, "1234");
            ps.setString(4, "Vadodara");
            int count= ps.executeUpdate();

            if(count>0){
                System.out.println("Data Inserted ");
            }
            else{
                System.out.println("Data NOT Inserted ");
            }
            con.close();

        }
        catch (Exception e){
            e.printStackTrace();
        }

    }
}
```

Retrieving the Data :

```
import java.sql.*;
/**
 *
 * @author hardikparmar
 */
public class GETDATA {

    public static void main(String[] args) {
        try{
            Class.forName("com.mysql.cj.jdbc.Driver");
            Connection con =
DriverManager.getConnection("jdbc:mysql://localhost:3306/parul","root","");
            Statement st = con.createStatement();
            ResultSet rs= st.executeQuery("SELECT * FROM `user`");
            while(rs.next()){
                System.out.println("Firstname : "+rs.getString(1)+" Username : "+rs.getString(2)+" City
:"+rs.getString(4));
            }

        }
        catch (Exception e){
            e.printStackTrace();
        }
    }
}
```

Practical 1 :

Develop a java application using concept of JDBC for user login. User will enter username and password. Application will match for the same in database table. If match is found then display message "Successful Login" and if not found then display message "Invalid Username and password .

```
import java.sql.*;
import java.util.Scanner;
/**
 *
 *
 *
 * @author hardikparmar
 */
public class GetData {
    public static void main(String[] args) {
        try{
            Scanner sc = new Scanner(System.in);
            System.out.println("Enter Username :");
            String username = sc.nextLine();
            System.out.println("Enter Password :");
            String password = sc.nextLine();
            Class.forName("com.mysql.cj.jdbc.Driver");
            Connection con =
DriverManager.getConnection("jdbc:mysql://localhost:3306/parul","root","");
            Statement st = con.createStatement();
            ResultSet rs= st.executeQuery("SELECT * FROM `user` where
username='"+username+"' and password='"+password+"'");

            if(rs.next()){
                System.out.println("Login Successful");
            }
            else{
                System.out.println("Invalid Username and password");
            }

            con.close();
        }
        catch (Exception e){
            e.printStackTrace();
        }
    }
}
```

Practical 2 :

Develop a Menu driven java application for student information which will create the table with appropriate columns. Menu will contain the options like insert, update and delete. Based on the option, data will be inserted or updated or deleted from table based on student id (student_id will be primary key). Display appropriate message for each operation.

Table :

```
CREATE TABLE `student` (  
  `student_id` int(20) NOT NULL,  
  `name` varchar(100) NOT NULL,  
  `age` int(11) NOT NULL,  
  `grade` varchar(100) NOT NULL  
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8mb4_general_ci;
```

```
ALTER TABLE `student`  
  ADD PRIMARY KEY (`student_id`);
```

```
ALTER TABLE `student`  
  MODIFY `student_id` int(20) NOT NULL AUTO_INCREMENT, AUTO_INCREMENT=3;
```

JAVA CODE (class name : StudentInformation)

```
import java.sql.*;  
import java.util.Scanner;  
  
/**  
 *  
 * @author hardikparmar  
 */  
public class StudentInformation {  
  
    public static void main(String[] args) {  
        Connection con = null;  
        PreparedStatement ps = null;  
        Scanner sc = new Scanner(System.in);  
        try {  
  
            Class.forName("com.mysql.cj.jdbc.Driver");
```

```

con = DriverManager.getConnection("jdbc:mysql://localhost:3306/parul", "root", "");
String sid;
String sname;
String sage;
String grade;

System.out.println("Menu:");
System.out.println("1. Insert Student");
System.out.println("2. Update Student");
System.out.println("3. Delete Student");
System.out.println("4. Show Students");
System.out.println("5. Exit");

int choice;
do {

    System.out.print("Enter your choice (1-5): ");
    String userChoice = sc.nextLine();
    choice = Integer.parseInt(userChoice);

    switch (choice) {
        case 1:
            System.out.print("Enter Student Name : ");
            sname = sc.nextLine();
            System.out.print("Enter Student age : ");
            sage = sc.nextLine();
            System.out.print("Enter Student grade : ");
            grade = sc.nextLine();
            ps = con.prepareStatement(" INSERT INTO `student`( `name`, `age`, `grade`)
VALUES (?, ?, ?)");
            ps.setString(1, sname);
            ps.setString(2, sage);
            ps.setString(3, grade);
            int count = ps.executeUpdate();
            if (count > 0) {
                System.out.println("Data Inserted ");
            } else {
                System.out.println("Data NOT Inserted ");
            }

            break;
        case 2:
            System.out.print("Enter Student ID : ");
            sid = sc.nextLine();

```

```

        System.out.print("Enter Student Name : ");
        sname = sc.nextLine();
        System.out.print("Enter Student age : ");
        sage = sc.nextLine();
        System.out.print("Enter Student grade : ");
        grade = sc.nextLine();
        ps = con.prepareStatement("UPDATE `student` SET
`name`=?, `age`=?, `grade`=? WHERE `student_id`=?");
        ps.setString(1, sname);
        ps.setString(2, sage);
        ps.setString(3, grade);
        ps.setString(4, sid);
        count = ps.executeUpdate();
        if (count > 0) {
            System.out.println("Data Updated ");
        } else {
            System.out.println("Data NOT Updated, Please Enter Correct Student ID");
        }

        break;
    case 3:
        System.out.print("Enter Student ID : ");
        sid = sc.nextLine();
        ps = con.prepareStatement("DELETE FROM `student` WHERE `student_id`=?");
        ps.setString(1, sid);
        count = ps.executeUpdate();
        if (count > 0) {
            System.out.println("Data Deleted ");
        } else {
            System.out.println("Data NOT Deleted, Please Enter Correct Student ID");
        }
        break;
    case 4:
        ps = con.prepareStatement("SELECT * FROM `student`");
        ResultSet rs = ps.executeQuery();
        if (rs.next()) {
            System.out.println("Student ID : " + rs.getString(1) + " Student Name : "
+rs.getString(2)+ " Student age : " +rs.getString(3) + " Student Grade : " +rs.getString(4));
        } else {
            System.out.println("NO Records Found");
        }
        break;
    case 5:
        System.out.println("bye!!!");

```

```

        break;
    default:
        System.out.println("Invalid choice. Please enter a number between 1 and 4.");
        break;
    }

    } while (choice != 5);

    } catch (Exception e) {
        e.printStackTrace();
    }

}

}

```

Practical 3 :

Develop an application using GUI for user registration. In first form user will enter the data for registration (e.g. Name, Birthdate, Email_id, Phone_No). When user clicks on submit button, data will be inserted into database and user will be redirected to another form. In this form data will be selected from database and displayed in proper format.

Table :

```

CREATE TABLE `users` (
  `uid` int(10) NOT NULL,
  `name` varchar(100) NOT NULL,
  `birthdate` varchar(100) NOT NULL,
  `email` varchar(100) NOT NULL,
  `phone` varchar(100) NOT NULL
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8mb4_general_ci;

```

```

ALTER TABLE `users`
  ADD PRIMARY KEY (`uid`);

```

```

ALTER TABLE `users`
  MODIFY `uid` int(10) NOT NULL AUTO_INCREMENT, AUTO_INCREMENT=3;

```

JAVA CODE (class name : Registration)

```

import javax.swing.*;
import java.awt.*;
import java.awt.event.ActionEvent;
import java.awt.event.ActionListener;
import java.sql.*;

/**
 *
 * @author hardikparmar
 */
public class Registration {

    static JFrame registrationFrame;
    static JFrame displayFrame;
    static JTextField nameField, birthdateField, emailField, phoneField;
    static JButton submitButton;

    public static void main(String[] args) {

        SwingUtilities.invokeLater(() -> {
            try {
                registrationFrame = new JFrame("User Registration");
                registrationFrame.setSize(400, 300);
                registrationFrame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);

                JPanel panel = new JPanel();
                panel.setLayout(new GridLayout(5, 2));

                panel.add(new JLabel("Name:"));
                nameField = new JTextField();
                panel.add(nameField);

                panel.add(new JLabel("Birthdate:"));
                birthdateField = new JTextField();
                panel.add(birthdateField);

                panel.add(new JLabel("Email ID:"));
                emailField = new JTextField();
                panel.add(emailField);

                panel.add(new JLabel("Phone Number:"));
                phoneField = new JTextField();
                panel.add(phoneField);
            }
        });
    }
}

```

```

submitButton = new JButton("Submit");
submitButton.addActionListener(new ActionListener() {
    @Override
    public void actionPerformed(ActionEvent ae) {
        try {
            Class.forName("com.mysql.cj.jdbc.Driver");
            Connection con =
DriverManager.getConnection("jdbc:mysql://localhost:3306/parul", "root", "");
            PreparedStatement ps = con.prepareStatement("INSERT INTO users (name,
birthdate, email, phone) VALUES (?, ?, ?, ?)");
            ps.setString(1, nameField.getText());
            ps.setString(2, birthdateField.getText());
            ps.setString(3, emailField.getText());
            ps.setString(4, phoneField.getText());

            int count = ps.executeUpdate();
            registrationFrame.setVisible(false);
            displayFrame = new JFrame("User Data Display");
            displayFrame.setSize(400, 300);
            displayFrame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);

            JTextArea displayArea = new JTextArea();
            displayArea.setEditable(false);
            if (count > 0) {

                ps = con.prepareStatement("SELECT * FROM users");
                ResultSet rs = ps.executeQuery();

                while (rs.next()) {
                    displayArea.append("User ID: " + rs.getString(1) + "\n");
                    displayArea.append("Name: " + rs.getString(2) + "\n");
                    displayArea.append("Birthdate: " + rs.getString(3) + "\n");
                    displayArea.append("Email: " + rs.getString(4) + "\n");
                    displayArea.append("Phone: " + rs.getString(5) + "\n\n");
                }

                displayFrame.getContentPane().add(new JScrollPane(displayArea));
                displayFrame.setVisible(true);

            } else {
                displayArea.append(" NO DATA \n");
            }
        }
    }
});

```

```

        } catch (Exception e) {
            e.printStackTrace();
        }

    }
});
panel.add(submitButton);
registrationFrame.getContentPane().add(BorderLayout.CENTER, panel);
registrationFrame.setVisible(true);
} catch (Exception e) {
    e.printStackTrace();
}
});
}
}
}

```

    <title>TODO supply a title</title>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
  </head>
  <body>
    <form action="url">
      Enter URL : <input type="text" name="url"> </br>
      <input type="submit" name="submit" value="GO">

    </form>
  </body>
</html>
```

Practical6.java

```
import jakarta.servlet.*;
import jakarta.servlet.http.*;
import java.io.IOException;
/**
 *
 * @author hardikparmar
 */
public class Practical6 extends HttpServlet {

    @Override
    protected void service(HttpServletRequest req, HttpServletResponse resp) throws
ServletException, IOException {
        String str = req.getParameter("url");
        resp.sendRedirect(str);
    }
}
```

```
}
```

```
}
```

Web.xml

```
<servlet>
    <servlet-name>practical6</servlet-name>
    <servlet-class>com.mycompany.divfservlets.Practical6</servlet-class>
</servlet>

<servlet-mapping>
    <servlet-name>practical6</servlet-name>
    <url-pattern>/url</url-pattern>
</servlet-mapping>
```

Practical 5 :

Develop a servlet application for implementing student grading system. In this system on first page student will enter his data (name, id and department). By clicking on next button he will be redirected to another page. On the second page he will enter marks of all 6 subjects. By clicking on "Generate result" he will be redirected to next page. On this page all information of student will be displayed along with the result (pass or fail) in appropriate color. Also display the name of student on each page he visits. (Use session management)

firstPage.html
